

Stormwater Management – Calculation & Aesthetics

Norfolk Botanical Garden, Saturday, Feb. 2, 2019, 9AM – 3PM

What do you do with too much water, too quickly? How much water is your site getting? How do you manage all that water with grace and beauty?

Rain Gardens and other small-scale stormwater best management practices (BMPs) pose two major challenges in their design: how much water must the site handle, and managing that water while still looking attractive.

The Virginia Society of Landscape Designers invites designers and other green industry professionals to participate in a day of lecture and guided exercises exploring the aesthetics and site analysis behind successful small-scale stormwater BMPs.

Speakers:

Dr. Eliza Pennypacker,
Dr. Stuart Echols

Keynote speakers; The Aesthetics of Stormwater Management

Chris Sonne

Calculating Stormwater In-Flow

Virginia Rockwell

Tools for Analyzing Soils in the Field

In addition, those registering for the February 2 seminar are invited to participate in a tour (on Friday Feb. 1, before the seminar) of a rain garden which will be used in exercises offered during the seminar. Registrants will receive more information upon registration.

Registration TBA – save the date – February 1-2, 2019
Boxed lunch and light breakfast provided with registration
